### **Redefine your limits.....**

To develop quality professionals with sound footing of basic engineering principles, technical skills and exemplary professional conduct. Work for students overall development Unleashing the potential of students using their deep insights, personal experience, knowledge and other perspectives. Besides teaching and industrial training, the holistic development program will include conversational and discussions, techno- cultural activities, exercises, games, writing assignment, mock interviews, guest lectures by subject specialist and motivational speakers to enhance a student's growth and success. Providing opportunities to bridge the gap between student and the external world to make students capable to face the corporate competitive environment. Students can show their talents while utilizing their skills, enhancing their knowledge and working capabilities and hence they can redefine their limits.....

## IT HACKATHON 3.0 2019

**Subject-** Proposal for event “IT- Hackathon”

**Department of Information Technology will be hosting the event, IT Hackathon 3.0 on 26th September 2019 from 9:30 a.m. to 3:30 p.m (6 hours), an event where education meets innovation.**

Programming is the 21st century's new lifestyle, new literacy. Hackathon is a practical hands-on event to solve problems through programming which involves creativity and critical thinking. It is an event that will gather all the zealous programmers together to make workable applications.

For the Second time, IT Hackathon was organized at JECRC campus by IT department on 12th September 2018, which was the beginning of the competitive coding arena in the college. IT Hackathon 2.0 witnessed enthusiastic participation of many students working on innovative ideas and projects. The themes covered were food, fitness and e-commerce applications and library management system as examples.

The judgement criteria included two rounds of judgement which considered parameters like proper idea representation, UI/UX design and completion of the project. The winners were awarded and certificates were provided to all.

The event was an exceptional hit. **IT Hackathon 1.0 & IT Hackathon 2.0** served as a platform which inspired our teams to compete at a higher level and take their innovation forward.

We are looking forward to continue the coding legacy this year as well with double enthusiasm and double fun.

### **What is a Hackathon:**

Hacking is an unorthodox way to solve problems, however, it is most often perceived negatively in the public. A hackathon is an event that gathers programmers with different skill sets to “hack”, or work collaboratively, on a software project.

### **What are our visions:**

1. **Promote creativity and team working** - IT Hackathon provides a platform for students to unleash their creativity and collaboration skills, two vital skills for future learning and career development, through coming up with ideas and building the product collaboratively.
2. **Educate students developmental skills**- Programming is the new literacy. Every industry, from finance to transportation, requires people who know how to program. By equipping students with development skills, more opportunities will open up for them in the future.
3. **Promote “Developing Culture”** - Developing culture encourages people to think out of the box. Students challenge themselves to create something new and to take ownership of what they create. These are important but often neglected experiences.

### **Rules and Regulation of Hackathon**

- IT Hackathon will be a 6 hours hackathon. Students will finish building their projects and submit them to the online portals. A panel of judges will decide on basis of the submissions.
- Prizes will be awarded based on the project's creativity, execution and impact made to the target users or the community.
- We will accept applications from a team of 2 students.
- Students are requested to bring their own laptops and equipment required at the event.
- Registration fee would be 150Rs. for a team. Internet facility would be provided at the place . Although, students are still requested to arrange internet connection themselves as well if possible.
- .Participants can be from 1st, 2nd and 3rd year and from all branches.
- Participants can choose any platform for development.

### **Judgement Criteria:**

- 40 percent marking will be on proper idea representation.
- 30 percent marking will be for UI/UX design.
- 30 percent marking will on completion of the project.

### **Requirements:**

- Min 7 Labs(depends on no. of registration)
- Internet Connectivity
- Technical Certificate

### **Outcomes:**

- To represent IT Department in various Hackathon.

### **Future Development:**

After our program, we will organize another hackathon for the whole JECRC College. We hope that JECRC can incorporate hackathons into their Other Learning Experience profile and promote programming to their students.

## IT Hackathon 3.0 PROBLEM STATEMENTS

### 1. JECRC COLLEGE

- Lack of information about Academic Activities in single platform

Teachers, students are encouraged to take up research and innovate. Current accreditation, ranking and grading norms emphasises research work and publications by both students and faculty. In order to take up research work and subsequently make publications of research findings, to collaborate and network with others who are working on similar problems there is a need to participate in global, national and local workshops, seminars, symposia, conferences, etc. Students have to search for information about dates, places and themes of such academic confluences. Lot of time and efforts are wasted in this regard and despite that they may miss out vital information and chance to make presentations.

Availability of single portal will be extremely useful for obtaining the information about all academic activities across the country, universities and international arena in chronological order and in subject areas so as to enable the students, faculty, and researchers to access information and prepare well in advance and participate effectively and successfully

- **Group Messaging Solution between Senior Exec's & MOD**

Evaluation of a group messaging solution between senior executives of DPSU's and MOD's workforce. The solution should be secure and only encrypted messages should be allowed, with no uploading of any file. The solution should support Group conference, Sharing of Desktop, Meeting Features.

Design a client server model with necessary secrecy/ security over mobile/ internet environment.

- **Digital solution to integrate the Scholarship Scheme with Performance**

The Department is running different types of Scholarship Schemes for the welfare of students. The government needs to constantly monitor the academic progress of beneficiaries' right from primary level to post-graduation level in order to link their academic progress with scholarship scheme on a digital platform.

- **Develop an integrated Industries app that provides information and support to multiple industries**

Design an app that helps connect artisans, trainers, producers etc. with the relevant startups who can provide marketplace for products and other solutions/services. The industries to be catered to should be the following:

- Handicrafts and Handloom
- Pharmaceuticals
- Tourism
- Energy
  
- **Detection of plagiarism and other fraudulent activities in post Placement related documents**
  
- **Mechanism to help rural people to self select for receiving benefit offered under Govt. scheme.**

In existing scenario, the approach followed for beneficiaries selection for various schemes is top down. All rural development programs/schemes aim at extending maximum benefits to rural poor. Assessment of eligibility is done by various officials assigned at Centre/States etc. A system is needed where the beneficiary can get selected into schemes and offer himself to tracked using unique identifier. **(Biometric perhaps!!!)**

Sample Data Required: Yes

- **We have a website [www.jecrcalumni.com](http://www.jecrcalumni.com), we would want the app to be synced with it for all those who are registered there do get counted as registered on the app too.**
  
- **Student's Attendance Management System**

HoD should be able to upload list of students of all classes in excel format

HoD should register the members of faculty in attendance management application using excel sheet

Faculty should be able to register and add the subjects and time table for subject he is taking

Faculty should be able to take attendance through mobile. (Simple and compact GUI)

Head of Department should be able to send the mail the attendance of the student to his/her parents.

HoD should be allowed to filter the mails based on some attendance threshold criteria.

Attendance management system should show all those students who are debarred from examination.

- **Time Table Management System**

Students and faculty can view the TT

Faculty should be able to report any clash in TT

Faculty and student can mail to DTI for any query, suggestion or request

DTI can request for centralized resources to CTTI

Any clash in any of the resource should be identified by the system.

- **Result Analysis**

(i) The team has to process the TR supplied by RTU (txt format can be available on request) and analyze the result based on various filters. Filters for the analysis can be:

- (a) College wise result Analysis
- (b) Department wise result Analysis
- (c) Class wise Analysis
- (d) Subject wise analysis

(ii) Analysis should provide various statistical measures such as Pass %, Mean, Median, No. of Backs, n toppers college wise, n toppers class wise, n toppers subject wise, % wise filtering.

(iii) Generate individual student's mark-sheet as per the RTU format

(iv) Facility to update the data after revaluation result.

(v) Student can request to update his result with proper proof.

## 2. STUDENT

- **Warden, Accounts & Registrar and the students to be linked to update payments of fee and detecting deviations, if any.**

- **Carpooling Solution**

The solution intends to reduce the private vehicle usage both by citizens and by officials. Using the solution, the citizens and officials can car pool based on their destination.

- **Water leakage identification**

Presently in Jaipur there are no systems to proceed systematically with leak detection. Only visual leaks are detected and most of the underground leakages go undetected. The Leak detection solution is expected to identify leakages in the water distribution network and must provide a way to analyses the same.

- **Solution for Water Contamination**

As part of the solution, teams are expected to provide solution to detect water contamination in the water distribution network. The system is expected to have two components (i) contamination detection system which will be deployed at the water distribution network level and (ii) front end solution which can be used to visualise and analyses location of contamination.

- **Waste Management**

Sensor-based technology solutions which can detect the nature of waste and enable automated segregation.

- **Mapping crime rate/type**

Map the crime rate, unemployment rate and the type of crime rate in different regions of India

### **3. HOSTEL**

- **Parking Monitoring System**

There are few problems in the present manual system. In case of illegal parking, the security guard checks the hard copied database and calls the owner of the vehicle regarding his illegal parking. The security department can also send this issue to the higher authorities in case of regular occurrence by a same owner. For this purpose, he maintains the record manually. In case of a vehicle which is not registered in the database of the security, it is not convenient to identify the owner of the vehicle easily.

- **Training and Placement Management System**

At present, the TPO department keeps all the records related to student profile, company profile, placement status manually or in file system. At the time of placement event, the TPO sends the information like Name of company, date, time, venue, eligibility criteria, and list of eligible students to the students through mentors by E-mailing. The ATPO has to keep record of all the placements and has to prepare analysis reports of the placement according to company wise, Package wise, Mentor wise etc manually. In the present system, it is very hard and time-consuming for the TPO to generate these reports as the students are divided into groups according to their academic performance and interest.

- **Smart Cafeteria System/App**

The university/College cafeteria is one of the liked places to visit for students. There are some problems in the existing system like a student has to visit the cafeteria for the current menu and rates, and it is difficult for the manager to inform the students about the current offers and special food on a specific day.

- **University Vehicle/Transport Management System** The transport department has to manage all the activities and reports manually in the current system of JECRC University. A web/App based system may be developed using the modules.

### **4. MISC**

- Build NLP Parser to extract formula output given textbook and create a molecular structure.
- Design wallet/other solution for a financial institution.

- Build hyper ledger/betting site using API.
- Create AR/VR Healthcare solution.
- Create the system to use hyper ledger for a government.
- Create an interconnected network for students to share data such as the movie, etc.
- Create hack which facilitates ease of accessibility for disable person.
- Peer to Peer Money wallet.
- Create the tinder style app that and give personalized suggestion to the users.
- Create a prototype of any web-based platform [Design challenge].
- Create a chrome extension using any of the above technology.

## **5. AICTE**

- Dashboard for all AICTE Initiatives & Schemes:
- AICTE has come out with many initiatives and also running number of schemes for its stake holders. In order to display the status of all Initiatives and Schemes on single window a Dashboard is required.
- Smart editor:
- A tool for fetching and editing information from scanned document mainly image type. A tool for fetching and editing information from scanned document mainly image type.
- Mobile App for Sansad Adarsh Gram Yojana (SAGY):
- Under Sansad Adarsh Gram Yojana, the Hon'ble Members of Parliament are adopting villages for their overall development. The mobile app should be able display notifications, details of villages adopted, details of Hon'ble M.Ps, details of the institutions associated with the adopted villages, details of Program conducted & developmental activities initiated under SAGY.
- ila Vikas Manch (ZIVIMA) – District Development Portal:
- A portal needs to be developed to facilitate district collector to upload the district specific problems, projects etc. The portal should be accessible to all the institutes so that the students can select the problems as their project work and submit solution in the form of report. The portal should have a provision for online interaction between district Authorities (respective department officials) and the concerned student group/Institute.

## JAIPUR ENGINEERING COLLEGE & RESEARCH CENTRE, JAIPUR DEPARTMENT OF INFORMATION TECHNOLOGY

---

- Dashboard for all MHRD Initiatives & schemes MHRD has come out with many initiatives and also running number of schemes for different type of stake holders. In order to display the status of all Initiatives and Schemes on single window a Dashboard is required.
- Prediction of Admission & Jobs in Engineering & Technology with respect to demographic locations Application Software to estimate/forecast employment potential of Graduates/Post Graduates in different branches/courses (for short term and long term basis) by correlating data from various sources

### 6. NATIONAL

- Agricultural Productivity
- Child Labour
- Dowry System
- Female foeticide
- Corruption
- Home Violence
- Attack on Tourist

### 7. DEVELOP CUSTOMER RELATIONSHIP MANAGEMENT SYSTEM

Challenge description with context: The Company wants to develop customer relationship management system which includes following points.

- Product registration,
- Product complain,
- Service centre management,
- Claim settlement

Exact Problem: Because of using this system after sales service mechanism become online and customer does not require to contact company after purchase.

Expected Outcome: Customer relationship management system becomes online.

## 8. URBAN TRANSPORT

### Background

---

Transport demand in India has increased by almost eight times since the 1980s as rapid economic development and increasing wealth among households has led to higher vehicle ownership. This is higher than anywhere else in the Asia-Pacific region, according to BCG. On average, travellers in Delhi, Mumbai, Bengaluru, and Kolkata spend 1.5 hours more on their daily commutes than their counterparts in other Asian cities during peak traffic times, according to an April 18 report released by The Boston Consulting Group (BCG) and commissioned by Uber. It is estimated that traffic jams in just these four Indian cities cost \$22 billion a year.

Road congestion may be reduced by the use of good public transport management, traffic management and car pools. Carpooling is the easiest and most common ridesharing arrangement. Promoting more efficient carpooling can not only help with urban traffic decongestion, but will also go a long way towards reducing environmental impact by cutting down emissions and idling.

**Exact Problem:** Design a car pooling system which takes into account the points of start & stop of the commuter and availability of cars at that particular point in time to match him with available vehicles. The system should be mobile app (Android) based.

The system should have two interfaces:

### Vehicle Owner

---

- For a vehicle owner, it should give an option to add his vehicles(s) with appropriate parameters.
  - The vehicle owner should be able to mention the availability of each vehicle for carpooling for at least the next 7 days.
  - The vehicle owner should be able to see all upcoming carpooling requests and approve/reject each request.
  - He should also be able to see a record of past trips.
- 

### Commuter

---

- For a commuter, he should be able to search for available vehicles by mentioning 3 parameters:
    - Trip start location
    - Trip end location
    - Trip start date & time
-

## JAIPUR ENGINEERING COLLEGE & RESEARCH CENTRE, JAIPUR DEPARTMENT OF INFORMATION TECHNOLOGY

---

- He should be able to send carpooling requests to multiple car owners for at least the next 7 days.
  - He should be able to see all upcoming trips with status (approved/rejected).
  - He should be able to see all past trips.
- 

### **Deliverables**

For the demonstration of the system, you may use pre-filled data. We would like to see the codebase route matching algorithm you are using. We would also like to see your database schema. You can use any language or framework to create this system.

### **Bonus credits**

---

- Make a web interface for both vehicle owner & commuter.
- Implement a hybrid mobile app (Android/iOS).
- Make an admin web interface where we can see all vehicle owners, commuters, trips, trip requests (past & upcoming) etc.
- Implement billing logic for each trip:
  - - Vehicle owner mentions cost per kilometer and cost per minute for each vehicle.
    - Trip data is collected from start & end time and distance computation.
    - Payment is collected at end of trip.

## **9. WASTE MANAGEMENT**

**Background:** With increasing populations, changing policy requirements, new sustainability and recycling goals and improved technology departments, municipalities across the globe are joining the “smart cities” movement to become more efficient in managing solid waste. The improvement of the urban waste collection service and, in general, the achievement of a more efficient management of the waste, is one of the main challenges that the cities face, especially due to the population growth. Thus, smart waste management is a key factor of smart cities.

---

**Exact problem:** Design a smart waste collection system that allows citizens to segregate the various types of solid waste they want to dispose and the municipal authorities to efficiently collect the same. The system should be mobile app (Android) based. The system should have two interfaces:

### **Citizen**

---

- Citizen should have an option to schedule a waste pickup request, at a particular date and time at his chosen location (via map or geolocation). The pickup request can be no less than 24 hours in advance.
-

## JAIPUR ENGINEERING COLLEGE & RESEARCH CENTRE, JAIPUR DEPARTMENT OF INFORMATION TECHNOLOGY

---

- Citizen should mention the amount of waste for disposal, choose what categories of waste are present for disposal as well as optionally snap a picture of the waste.
- Citizen should be able to see all upcoming waste pickup requests, as well as past pickup request history.

### **Garbage Collector**

---

- Garbage collection is done via trucks. Each truck can only carry one category of waste. You have to calculate the most optimal route for each truck, basis the previous days pickup requests from citizens.
- Garbage collector should be shown a list of all pickups to be made that day, along with a most efficient route for all pickups. Please note that start and stop point for each truck is from a central depot with fixed location.
- There should be GPS based navigation for the garbage collector from one point to another.
- For each pickup request, garbage collector is shown the following:
  - Citizen name & location (address & map)
  - Garbage amount
  - Garbage category
  - Garbage photo, if available
  -

**The following categories of waste are available:**

  - Organic waste (kitchen waste, vegetables, flowers, leaves, fruits)
  - Recyclable waste (paper, glass, metals, plastics)
  - Toxic waste (old medicines, paints, chemicals, bulbs, spray cans, fertilizer and pesticide containers, shoe polish)
  - Electronic waste (batteries, phones, TVs, laptops)

### **Deliverables**

---

For the demonstration of the system, you may use pre-filled data. We would like to see the codebase route matching algorithm you are using. We would also like to see your database schema. You can use any language or framework to create this system.

### **Bonus credits**

---

- Make a web interface for both citizen & garbage collector.
- Implement a hybrid mobile app (Android/iOS).
- Make an admin web interface where we can see all garbage trucks, citizens, collection requests (past & upcoming) etc.
- Implement a waste classification helper for citizen which suggests what waste category it is after the citizen takes a photo of the waste. It can suggest multiple categories as well.

## **10. REDUCING PHISHING ATTACKS IN ONLINE/MOBILE WALLETS AND NET BANKING:**

Phishing attacks are becoming common. The common man is sometimes duped of hard earned saving due to phishing attacks. Specially vulnerable are old people. They are targeted for their net banking/online wallet PIN or password. The developer should design a system to solve this problem. This problem cannot be solved using only technology. Special focus will have to be put on User Experience (UX) design and User Interface (UI) design. Solutions should keep in mind old users, users who are from villages, users who are not technically savvy and kids. These are specially vulnerable groups.

## **11. ALL IN ONE APP:**

All in one app where we can have complete smart services for university related to cleanliness, lost & found, canteen orders, event notifications, etc.

You think standing in the queue for ordering food and then waiting for the food to get ready is wasting time? Yeah me too. How if we could just order the food after (after the lectures/before reaching the canteen) itself and the food gets ready before you get there.

So, you've found an earphone and not sure where you're supposed to report it? Found dirt in your classroom and don't know the appropriate authority to report? Could we just directly report this in the app and the appropriate authority will take care of the situation?

## **12. DEVELOPMENT OF SMART CONTRACTS:**

Real estate is one of the largest marketplaces that blockchain technology will have a substantial impact on. Real estate is a physical asset that can be "tokenized", which is a fancy way of saying "fractionalized into digital assets that are easily managed and transferable." This will open up the real estate investing world to smaller players who can participate in deals regardless of the size. The other huge disruption will be the use of smart contracts which make the real estate buying and selling process much more autonomous, trustworthy and efficient. Along with insurance, real estate is a massive marketplace that is well on it's way towards disruption as a result of blockchain technology and applications.

**Exact problem:** Proposing development of smart contracts, which will enable real estate contracts, escrows, property records (deeds, for example) to be completed and monies distributed without title companies or attorneys, with no human intervention.

eg : A homebuyer to buy a home and complete the sale (along with escrow and title insurance) by clicking on a shopping cart on a website. The block chain will ensure that the buyer gets the title or deed and the seller gets the cash (via a cryptocurrency). The block chain will also record the title or deed to the appropriate public records.

### **13. QUALITY HEALTHCARE**

**Exact problem:** Obtain a solution for obtaining quality healthcare across all strata of society.

There is a lack of quality and experienced healthcare professionals in rural India. Due to the limited availability of such professionals in these areas and that too not qualified and updated enough with the modern life problems and corresponding obtainable treatments, there is a lack of quality maternal care, delay in diagnosis and hospital overcrowding. Create a solution for this problem keeping in view its reachability such that the solution is socially economical and within the reach of every indigent individual residing even in the remotest part of the rural area.

### **14. LANGUAGE DIVERSITY:**

The diversity of the country wherein one hand is a good thing comes along with a lot of barriers on the other hand. The language issue is one such barrier which affects the flow of information obstructing a number of day to day life activities in the fields of government and social reforms, health care, local economy and many others. Such problems hinder the rate of social development which ultimately affects the overall development of the country. Design flexible possible solutions for such problems keeping in view it's accessibility by the citizens of India residing in different parts of the country, it's economic feasibility and ease of understanding by all kinds of citizens of the country.

### **15. PROBLEM STATEMENT:**

Majority of departmental stores such as D-mart , Big bazaar ,Reliance Fresh ,etc are not able to track complete customer activity at their store as to what all products did customer see,what they picked ,what they put back in shelves ,what they did not notice, which customers buy quick,which customers explore a lot before buying ,etc .They are just able to record what they sold via billing system.So,it becomes challenging for them to plan product placement and customer service strategy,etc

Now, since most of them have a CCTV camera installed at their premises for security reasons.Can you built a prototype of a computer vision model which uses the existing video file and draws valuable insights out of it.

### **16. PROBLEM STATEMENT:**

Majority of educational institutions have a tall hierarchy of people which are to be reached out and asked for their authentication whenever any of documentation is to be done. For example -: If you wish to take a leave for few days you need to submit the application to the class teacher and then it goes to the HOD and then to the principal. This process does ensure that a trusted authentication is done which cannot be challenged back but its time consuming and unproductive.

Develop a block chain based ledger which involves all the stakeholders in it and has a functionality to get its authentication from all of them.

### **17. PROBLEM STATEMENT:**

Taking attendance in colleges consumes time. Moreover students are also able to bypass and fake the system easily.

Develop an image recognition application which marks attendance of students remotely by using video clip from the CCTV installed in the college premises.

### **18. PROBLEM STATEMENT:**

Its hard to find full time and part time work and job opportunities in rural parts of India .Majority of it explored via referral, newspaper ads, job portals or the fraud placement agencies. Plus, the existing job portal have a too complex UI and UX to operate and majority of them are in English language which acts as a barrier to non English compatible workforce .The problem also lies in not being able to inform the workforce about opportunities that exists locally and thus candidate is forced to migrate.

Develop a solution targeting vernacular language speakers which tells them about opportunities that exist locally (0-50 km) and allows them to apply to it hassle free. Keep in mind the simple and intuitive usability of the solution designed according to the targeted audience.

## Workshop OF IT Hackathon 3.0

### Day1 (18/9/19)

#### Introduction to Web

Aroma of Hackathon 3.0 can be felt in the college campus from its various pre activities and workshops that are going on. On 18th Sept 2019, IT Hackathon 3.0 team organized a session on 'Introduction to Web' in association with the department's OSD team where the enthusiastic students were introduced to the world of website development.

The OSD team mentored the students about how a website is developed.

Students of OSD team gave the audience step by step instructions on how they can create and style a webpage. Basics of HTML and CSS were taught along with certain add-ons. Video tutorials of these made the grasping ultra smooth. The team also suggested different text editors that can be used. They also gave an introduction to templates to make their websites appealing. Certain thing in web development arena was also shared. Simultaneous doubt clearing sessions made the workshop exceptionally interesting. The keen faces clearly mentioned their motivation and curiosity to learn in the session. Everyone thanked the OSD team for their support. The show ended on a happy note with a happy feedback from the listeners.

## Day2 (19/9/19)

### What is Hackathon

On 19th Sept 2019, Hackathon coordinators organized a workshop on the what's and how's of hackathon. We briefed students what actually hackathon is about and how do you code your solutions to make workable applications. Three of the third year students ( ,Mohit Shah ) shared their experiences of hackathon 2.0 to motivate the juniors. The team also explained how the event is beneficial for the students. This all ignited a spark of interest in them. The students were also shown an example problem and the solution that can be developed for it. The students were found keenly encouraged and curious about IT Hackathon 3.0

### Introduction to Android

On 19/9/19, IT HACKATHON 3.0 team coordinators organized their third workshop which was based on mobile application development. The session witnessed an audience of around 70 enthusiastic students who were very willing to learn the concepts of android. The mentors for the day were Mohit shah. The workshop started with a presentation which explained what is Android and its importance in the present market. After a brief introduction about the subject, the mentors gave a tutorial on the design and coding part which was presented on the Android studio. The students were taught how they can develop a simple application using simple java codes. They were also introduced to the xml files, design and built features of the studio. It was followed by showing them an example mobile application developed by Mohit Shah himself. He also shared his experiences while he learnt Android. The download links for Android studio and free tutorials were also shared. Next, came the Q/A session where the doubts of the curious minds were cleared by the mentors. The air in the room talked of learning and creativity. The student gained a lot from the workshop.

### **Promotion Message/Email for All Hod's**

Dear Sir/Ma'am,

We are happy to inform you that after a great success of IT Hackathon 2.0 previous year , We are back again with IT Hackathon 3.0 which will be held on 26/09/2019.

#### **About IT Hackathon 3.0 :**

Hackathon is a hands on event to solve problems through programming which involves creative and innovative skills. It is an event that gathers zealous programmers together to make workable applications. IT HACKATHON is organized at JECRC campus by IT department which encourages creativity and critical thinking by creating an atmosphere of competitive coding in the college.

#### **IT Hackathon 2.0 in a nutshell:**

It was organized at JECRC campus by IT department on 12th September 2018, which was the beginning of the competitive coding arena in the college. IT Hackathon 2.0 witnessed enthusiastic participation of many students working on innovative ideas and projects. The themes covered were food application, fitness application, e-commerce and library management as examples.

#### **The winners were :**

Mr. Ujjawal Gupta (3rd Year)

Mr. Vatsal (3rd Year)

Our IT department has taken a big leap to make healthy and innovative coding environment among students of JECRC College.

Students of your branch are welcomed to participate. It will not only boost their coding skills, but will also enhance the capability of a mind to innovate and think beyond the limits. Moreover, you'll get to witness an unparalleled experience of learning and innovation!

For registration check out this link:

<https://docs.google.com/forms/d/1uFdv5F738-j71kX3Js86CtIBxykNjKnldW7wt96w5z4/edit?usp=drivesdk&chromeless=1>

### **Promotion Message/Email for Students**

IT department is organizing the IT Hackathon 3.0. It will be a 6 hours hackathon in which a problem statement will be provide before 20 day of IT Hackathon 3.0. You can choose any platform and internet facility for the development according to the problem statement given.

Based on this hackathon, IT will recognise student's strength and will promote such students to bigger platform. So bring out your best and get the chance to participate in the further

Hackathons on a larger scale.

Attendance, refreshments and attractive prizes will be given.

Technical Certificate will also be given to the participants.

**DATE: 26th September 2019**

**TIME: 9.30am to 3.30pm**

**REG FEE: 150 Rs**

**Max Team Members: 2**

We will try to provide you the system as well as internet but to avoid any inconvenience and for your benefit bring your system and internet facility for development.

**Faculty Coordinator -**

Name: Preeti Sharma

SDO

IT department

Contact: 8696939346

## IT HACKATHON 3.0 PERMOTION POSTER

The poster features a dark blue background with a glowing circuit board pattern. At the top left is a circular logo for JEGRC with the text 'NURTURING TALENT'. At the top center is a stylized brain icon with a lightbulb base. At the top right is the Department of Information Technology logo. The central text reads 'Department of Information Technology Proudly Announces' above a large hexagonal box containing 'IT HACKATHON 3.0'. Below this is a rounded rectangular box with the date '26th September 2019'. Underneath is the text 'Registration Fee: 150/-'. At the bottom left, it lists the Faculty Coordinator as Ms. Preeti Sharma, SDO, IT Department, with contact number 8696939346. At the bottom right, it lists the CONTACT: Manan Bindra : 9001202082 and Ishika Mishra : 8949772928.

## IT HACKATHON 3.0 ITINERARY

### *Schedule*

**26<sup>th</sup> September, 2019**

	<b>September 26<sup>th</sup>, 2019</b>
8:30 AM	Check In of all teams
8:45 AM	Inauguration
9:00 AM	Welcome Address by Principal of the Institute
9:05-9:30 AM	Address by HOD
9:30 AM	Hacking/ Coding Begins
10:30-11:30 PM	Refreshment
11:00-12:00 Noon	Mentoring Session 1 (5-7 minutes per team, Individual Mentor Trainer to train the teams)/ First Round of Evaluation (Checkpoint 1)
1:30 -2:30 PM	Mentoring Session 2 (7-10 minutes per team, Individual Mentor Trainer to train the teams)/Power Round of Evaluation
2:45-3:45 PM	Power Judging
3:45-4:15 PM	Valedictory Session; Result Finalization and announcement; National Anthem

Tue, Sep 24, 2019 at 1:27 PM

Dear Sir,

"The Journey of a thousand miles begins with one step".

Team IT Hackathon 3.0 feels great pleasure to invite all our esteemed members of JECRC Foundation to the inauguration of the most awaited Digital Coding event IT HACKATHON 3.0 on **28th September 2019**. Briefing you about the event, IT HACKATHON 3.0. will last for 6 hours. The teams participating in this event will be given a problem statement on which they will develop applications, website, etc. using different computer programming languages. This event will help prepare the students for the workplace by enabling them to develop their skills and abilities and providing them with real-world experience.

For more details please find attached detailed Itinerary of the event. You all are requested to be seated by 8:30 am as the program will be started by 8:45 am sharp.

Your coordination and support is highly appreciated and we are thankful for your consideration.

-

Regards,

**Preeti Sharma**  
 Assistant Professor  
 SDO, Department of Information Technology  
 JECRC Campus, via Silapura, Tonk Road, Jaipur-302022, Rajasthan, India

Tue, Sep 24, 2019 at 1:44 PM

Dear Preeti,

My address may be removed from the program. It may be included in Valedictory Session.

Best wishes

**Dr. Vinay Kumar Chandra,**  
 B.E., M.E. Ph.D. (Electrical)  
 SM IEEE, LM ISTE, LMCSI  
 Principal,  
 Jaipur Engineering College and Research Centre (Jaipur),  
 Tonk Road, Jaipur  
 Past Treasurer PES Delhi Chapter,  
 Chair IEEE Education Society,

Dear Sahidkhan ,

**Congratulations!**

IT HACKATHON 3.0 team feels great pleasure to inform you about the confirmation and selection for your participation in the event with your idea.

IT HACKATHON, where education meets innovation, is a yearly activity in the department to boost not only coding skills but also to enhance the ability to innovate and create. The mission of this event is to nurture the idea of competitive coding and to help students think beyond the limits.

The team is required to report on 26th September 2019 sharp at 8:30 am., C block(Seminar Hall:CT-1& CS-1), JECRC Campus.

Come, experience the most innovative six hours ever!

All the best!

-

## RESULTS

**Total Team: - 80**

**Runner Up 2<sup>nd</sup>:-**

- **Ms. Kanika Agarwal (3rd Year , IT)**
- **Ms. Harshita Saxena (3rd Year , IT)**
- **Mr. Mayank Patni (3rd Year , IT)**

**Runner Up 1<sup>st</sup>:-**

- **Mr. Aditya bhatnagar (2nd Year , IT)**
- **Mr. Himanshu Singhal (2nd Year , IT)**
- **Mr. Bhanvi Meghani (2<sup>nd</sup> Year , IT)**

**Winner:-**

- **Mr. Nikhil Soni (2<sup>nd</sup> Year , IT)**
- **Mr. Prithvi Raj (3<sup>rd</sup> Year , IT)**
- **Ms. Ishika Mishra (2<sup>nd</sup> Year , IT)**
